## REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

a) the instant claimed invention is statutory under 35 USC 101 because the claimed "program code" is stored on "computer readable media" which may be "one or more of: fixed disks, removable disks, random access memories (RAMs), read only memories (ROMs), magnetic disks, and optical discs. Further, and by way of example, the program code may be installed on a circuit tester (e.g., the 93000 System on a Chip (SOC)..." (para. 0008 of the instant Specification); and the output of the claimed invention is a "useful, concrete tangible result," namely, an "ASCII format description file"; and

b) the prior art of record does not suggest or disclose the claimed combination of elements, most notably the "user-modifiable ASCII report format that is formed, at least in part, of placed ones of said user-selectable representations of circuit test data; and program code to i) interpret relative sizes and placements of elements forming said user-modifiable ASCII report format, and ii) generate an ASCII format description file in response to said interpretation." The closest prior art of record is Danialy et al. ('871 B2) which teaches in col. 12:

When the user selects a save option, the program writes, in ASCII format, all of the test specifications to a user specified test configuration file 50 in the sequence illustrated in the test configuration box and includes all of the runtime parameters specified in the parameter specification window for each specific test controller specified in the test configuration.

The user interface also provides means for displaying and editing all of the possible parameters associated with the test controller types handled by the system. FIG. 8 illustrates a test step window for specifying "Advanced" parameters associated with a selected logic test controller. A similar window would be provided for all other type types of test controllers, but with

different parameters. Still further, the user interface may provide a button or other means for invoking any ATE program, if desired, to allow the interface to directly control the tester.

It will be understood that the content and layout of the user interface windows may be modified without departing from the spirit of the invention.

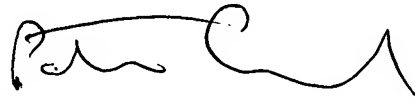

But Danialy et al. do not suggest or disclose the specific aforementioned combination of claimed elements.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee.
